C. Loading Vehicle Design Resources I've built up a huge collection of vehicle I'm a Mech. - Mass Control Medspaces - North (Sonic Myth, Descent, Mechzone). Both programs claim to be easy to use; however, they are not quite as simple as some claim they are. Both Phoenix and LIMN require considerable time to learn, but both programs offer sufficient functionality for the average person to use in a single project. Q: Cakephp : validate a unique composite primary key How can I have a unique composite primary key in cakephp? I have 2 models with the following structure class user_group_users extends AppModel { public \$hasMany = 'users'; public \$primaryKey = array('user_group_users_id', 'user_id'); public \$validate = array('user_id' => 'unique:users_has_user_group',); } class user_group extends AppModel { public \$hasMany = 'user_group_users'; public \$primaryKey = array('user_group_id', 'group_name'); public \$validate = array('user_group_id' => 'unique:users_have_user_group',); } This gives me the following error messages An active record query has encountered a condition which may cause infinite looping. If this is expected it can be turned off with "DebugQueries"=>false Line number: 54 Line 54 in the user_group_users model is public \$validate = array('user_id' => 'unique:users_has_user_group',); I have tried using \$this->validate = array('user_group_users_user_id' => array('rule'=>'notEmpty', 'message'=>'Your Id is required'), 3e33713323
