In order to use the application and to quickly access the Active Directory you need to provide your login credentials. SUADE Description: - if the account is locked; - if the user's password is wrong; - if the user's password is changed; - if the user is disabled; - if the user's password is expired. The overall aim of the proposed research is to determine the sites in the spinal cord where the metabotropic glutamate receptors (mGluRs) are localized and where they are activated following activation of this receptor type. A systematic series of experiments is planned to determine the brain-spinal cord distribution of mGluRs, their relationship to specific types of neurons and the distribution of glutamate released from those neurons, and the distribution of the various receptor subtypes in the spinal cord. The specific aims are: 1) Determine the sites in the brain and spinal cord where mGluRs are localized by immunohistochemistry using specific antibodies. 2) Determine the location of mGluRs in the cells that contain glutamate by single and double-label immunofluorescence with antibodies that recognize the mGluR2 subtype of receptor and antibodies that recognize specific types of neurons. 3) Determine whether mGluRs are localized to specific types of neurons by double-label immunofluorescence studies using antibodies that recognize mGluRs and antibodies that recognize specific types of neurons, and 3) Determine whether mGluRs are localized to specific types of neurons by single and double-label immunofluorescence studies using antibodies that recognize mGluRs and antibodies that recognize specific types of neurons. 4) Determine if mGluRs are activated following activation of this receptor type. These experiments will utilize in vitro microdialysis to determine the release of glutamate following activation of mGluRs. Once these experiments are completed, the location and activation of mGluRs in the brain and spinal cord will be determined.
