I think it is very useful if the only thing you do on your computer is to check email, surf the web, or use a software that generates reports, and you get tired of pressing the same function key for a month or two, because it does not do what you want. You have a keyboard and a mouse, so you can use those for something else, like playing games, chatting on Facebook, watching movies, listening to music or reading web pages. You can get tired of doing the same thing. If you have a problem with the functions, the old keyboards do not react and you need to fix them or replace them. The problem with those keyboards is that the keys do not always work the same. Sometimes you can find a new keyboard that is perfectly fine, except for the function keys. It is very annoying because you have to search for a new keyboard every time you buy a new computer, that's why I created this tool. Status Key Translator is very easy to use, anyone can use it. You can download it for free, but you can choose to pay for it if you want to, it will not cost you anything. What you get:

- * Ability to translate function keys to keyboards. *
- * Ability to convert function keys to macros. *
- * Ability to

assign multiple function keys to multiple macros. *

Ability to save and load function keys configurations to your computer. *

Ability to manage your functions and macros, even if they are not assigned. *

Ability to export / import function keys. *

Ability to manage any multiple keyboard's function key settings. *

Ability to send or remove function keys. *

Ability to create new function keys. *

Ability to assign new keys to the currently selected function key. *

Ability to assign new function keys to the currently selected keyboard. *

Ability to assign multiple keyboard's function keys to a single macro. *

Ability to assign multiple keyboard's function keys to a single macro. *

Ability to convert multiple function keys to macros. *

Ability to change the Keyboard Layout to English. *

Ability to change the keyboard layout to other languages. *

Ability to change the number of function keys to the selected keyboard. *

Ability to reset the function key to default. *

Ability to change the function key to the default.

Sub Title Edit

Title Changelog 1.1 This version added 4 new function key: Laptop (F1), Alarm (
