I am interested in having a form field submit automatically to itself upon loading the page or when a submit button is pressed without the user having to manually change the auto submit value. I've seen a lot of people discussing this, but it seems like the solution is related to a specific browser. On Chrome, it doesn't work with autoSubmit="true" on a element; if the user visits a page with a form on it, the value will change to "on" to prevent the submission. I've tried setting autoSubmit="false" and using onSubmit to no avail. Here is the form field in question: And here is the function I wrote to test it: function test() { var input = document.getElementById("autopost"); if (input.value == "true") { input.value = "false"; document.form.submit(); } } I'm using Chrome 23.0.1271.95. A: onSubmit is defined in the HTML5 spec. It's the only event that you should use, unless you know exactly what you are doing. Auto-submitting means your page can be submitted before you have a chance to do anything - as you can see from the spec. It is not an event, it is a part of HTML5 If you need to auto-submit in some browsers, here is a library for that - u can try it out Comparing the stories that first made their mark in 2013 to this year's most critically acclaimed feature film, this is the definitive look at how the creative process unfolded. Actors, musicians and artists discussed their experiences with their most demanding project and the obstacles they faced in making their movies, such as what lengths they went to to get cast and how they overcame budget or scheduling

Archive Extractor Pro 1.0.0 â€¢.The relationship between internal and external exposure to electromagnetic fields from power frequency band in five Indian power plants. In recent years, there is an increase in the awareness of the adverse health effects of electromagnetic fields (EMF). The objective of the present study was to investigate the exposure levels of human population to EMF from power frequency band in five thermoelectric power plants in India. For this purpose, the levels of magnetic and electric fields and power frequency EMF at different locations in the five power plants were measured using modern instruments (lora types). The power frequency EMF was measured in different locations (outdoor, indoor, factory floor, floor of transformer room and transformer room) while the magnetic and electric fields were measured at different locations (outdoor, factory floor, transformer room, power meter room, power transformer room, transformer room and generator room). For the present study, the exposure levels of human population to EMF were calculated by integrating all the contributions from internal and external sources. The calculated exposure levels were compared with the permissible levels given by international organizations. The result revealed that the maximum measured value of EMF inside the five power plants was 6.2 V m(-1) (0.07 µT). The contribution from external sources was found to be the maximum in the power meter room (0.07 µT). The contribution from internal sources was found to be the maximum in the transformer room (0.01 µT) and the generator room (0.01 µT). The calculated level of total EMF exposure to the power frequency band ranged from 0.46 to 1.04 mV m(-1) (4.3 µT to 8.6 µT) with an average of 0.59 ± 0.05 mV m(-1) (5.9 µT). The permissible levels of EMF are as follows:
