Visit: [Morricone in The New York Times book review](#)By Lou Lumenick The effect of sound on the mind is one of the most fascinating topics in film history, and in The New York Times book review, Steven Spielberg talks about the power of sound as he picks the year's best book on film. Talking about storytelling, sound and the way the two are related, Spielberg says sound is an essential storytelling tool - it develops the main character or makes him more vulnerable, and it can also create a sense of immersion in the story. "A movie like 'Midnight in Paris' makes its narrative more powerful by the use of sound," Spielberg says. "Most films are silent, and those that have sound tend to have limited role for music. But what's essential to storytelling are the tiny sounds, the hum of a car's engine, the creak of a floorboard as a character walks into a room or steps out of a cab." Spielberg points out that sound can be used to give a story dimension that is absent in film. "It's like when you play chess with someone and know when he's thinking because of how he moves his pieces, the way his eyes move." Though The New York Times book review focuses on dialogue and characters in the stories, Spielberg says he has a different appreciation for how sound can enhance the [b7e8fd5c8](#)

LanWhois

Most often than not the users of the World Wide Web (WWW) do not bother about the laws or the regulations that are applied to them while they surf the Internet. Every now and then, however, surfers seem to get a little bit curious and they want to know whether it is safe to visit some website, an image or even to send an e-mail. Should they be under control of the laws of the location in which the server hosting their WWW site is located, they would probably want to know about the particularity of the laws of their country. LanWhois is a free program you can run on your Windows-based computer and it will instantly answer some common questions like "where is located?", "who is owner?" or "is it possible to send email to ?" According to the creators of LanWhois it is designed to help users of the WWW "in addition to directly serving its purpose as an entry point to the Internet, it provides additional services, such as helping the user locate IP addresses or domain names", but this is not stated in a very clear manner. Those who do not like HTML-based editors or simply cannot write scripts in HTML may download this tool and use it. LanWhois Description: This is the ultimate tool to find out details about the web hosts and the websites that you visit. Find out who is hosting the website that you just go to and who is that website owner. Maybe you have heard the not so good news about some of the Internet service providers and you want to know more about them. With this application you can save all this information in a document and print it whenever you want. You can browse the website. After installation you will be asked how to run the application so you should answer Yes. How to install "LanWhois": "LanWhois" is an easy to use software, just run it and in a very short amount of time you will find information you are looking for. All you need to do is to input the specific domain name or IP address you want to know. The tool will provide you with: information about the website and its server, who is hosting it now and where it is located. How to Use "LanWhois": Go to "LanWhois" application and input the specific domain name or
